

INFORMATION SECURITY AUDIT - THREAT & RISK ASSESSMENT

REDUCE YOUR RISK EXPOSURE AND PROTECT YOURSELF

Who are we?

Suraksha audits are conducted against international standards, thoroughly for web, application, mobile, database, operating systems, servers, cloud services, software as a service and complete 360 degree visibility. Audits, threat and risk assessments are provided for technology, cloud, processes, people and social media to develop the risk profile and check legislative compliance and standards conformance.

What do we offer?

- Penetration testing
- Information Security Awareness and Training
- Governance, Risk and Compliance Management
- **Information Security Audit**
- Forensic Investigation
- Vulnerability Assessments
- Search and Find (Inappropriate material)

Why do Information Security Audits?

Given recent high profile events in both the private and public sector, information security has never been higher on the board agenda. Reputation, trust and brand value can all be seriously affected by information loss and theft.

Security Audits and Threat & Risk Assessment are one of the most critical services that ensure the safety of sensitive and critical information and applications within your organisation by exposing all the vulnerabilities and provide room for timely remediation.

What we can do for you

1. Information Security Policy and Risk Management Audit
2. Information Security Organisation Audit
3. Information Security Documentation Audit
4. Information Security Monitoring Audit
5. Cyber Security Incidents Monitoring Audit
6. Physical and Environmental Security Audits
7. Personal Security for Information Systems Audit
8. Product and Media Security Audit
9. Software, Network & Cryptographic Security Audit
10. Access control & Working off-site Security Audit

Audit Highlights

- Quick snap shot audit
- Focus areas audit in areas of high risk
- Audit recommendations and high-level business impact analysis.

What does this mean to you?

- Peace of mind and due to identification of vulnerabilities within the critical applications & websites of your organisation
- Assessment for your third party service providers such as cloud, application developers and hosting service providers
- Help reduce organisation's insurance premiums
- Provides early detection and prevention of potential attacks

What does it cost?

- A typical packaged snap test that lasts 2 weeks would be costed at par
- A more extensive dig deeper into the areas of vulnerability typically would yield a rich plethora of advice
- In addition a time and material estimate and quotes can be easily provided.
- These are indicative and may change based on your environment and other factors.

Place: Anywhere in Australia, NZ, Asia and the Middle East

Who should use these services?

Small to medium businesses large corporations and Governments
